

The Assurance System™ Training Program is a web-based introduction to pharmaceutical care practice, which is the basis for documentation in the Assurance System™. This program teaches the aspects of the practice as well as the system for rapid implementation and launch of your medication therapy management service.

THE TRAINING PROGRAM CONSISTS OF THREE COURSES:

- 1 An Overview of the Practice and the System** *Lays a foundation for the pharmaceutical care practice that the Assurance System™ was designed to support*
- 2 Using the Assurance System™** *Guides practitioners through the process of documenting patients in the Assurance System™*
- 3 Documenting Follow-up Encounters and Evaluating Data** *Discusses the importance of completing follow-up evaluations in order to determine actual outcomes that have occurred in patients as result of recommendations made by practitioners*

WEEKLY STRUCTURE

The web-based training is structured to allow practitioners to complete one course per week, although practitioners may work ahead and complete courses more rapidly if desired. In addition to reviewing online materials for each course, practitioners will be asked to work-up example cases as well as care for one patient from their practice, and document each of these encounters in the Assurance System™. Practitioners will also receive feedback and tips on the documentation completed. Practitioners can expect to spend approximately three hours to complete each course, which includes documenting the encounters.

SOFTWARE WEBINARS

Regularly scheduled one-hour webinars will be delivered by our in-house experts in practice implementation and development. These demos will detail the operation, functionality, features and use of the Assurance System™. Webinar topics will coincide with and reinforce online course content.
